Deriving the Range

A projectile leaves the ground at speed v_0 and angle θ.

Deriving the Range

A projectile leaves the ground at speed v_0 and angle θ.

$$t_{\text{flight}} = \frac{2v_0 \sin\theta}{g}$$

Deriving the Range

A projectile leaves the ground at speed v_0 and angle θ.

$$t_{\text{flight}} = \frac{2v_0 \sin\theta}{g}$$

$$R = v_0 \cos\theta \; t_{\text{flight}} = \frac{v_0^2 \sin 2\theta}{g}$$

Checking the Result

- The range is largest at $\theta = 45^\circ$.

Checking the Result

- The range is largest at $\theta = 45°$.
- At $\theta = 0$ the range is zero.

Checking the Result

- The range is largest at $\theta = 45^\circ$.
- At $\theta = 0$ the range is zero.
- The maximum is $R_{\text{max}} = v_0^2/g$.
